

## Data Preprocessing Phase

[Home](#) / [Preprocessing](#)

In this phase, you can load the images and masks from the data folder. The data folder should contain both images and masks within the same directory. Each folder (images and masks) must include subfolders for the classes (e.g., Stage 1, Stage 2, Stage 3), and the corresponding files must have matching names. The images should be placed in the **Original** folder, while the masks should be in the **Masks** folder.

Current Stored Pickles: 1
